Report Highlights: This brief report describes the 2018-2020 industrial market for biomass for energy generation in the Netherlands. Based on the allocated Dutch government subsidies, domestic biomass consumption is forecast to grow from about 1.8 million mt in 2018 to about 2.3 million mt in 2020. It is expected that an increasing volume will be imported either in the form of wood chips or pellets.

Richard P. Vlosky, Ph.D.
Director, Louisiana Forest Products Development Center
Crosby Land & Resources Endowed Professor of Forest Sector Business Development
Room 227, School of Renewable Natural Resources
