New White Paper

Global Wood Pellet Fuel Markets in 2022

SUPPLY SHOCK!

A supply shock occurs when a significant portion of a good or service is no longer available in the market and substitutes are scarce or non-existent.

This white paper describes how the loss of pellet fuel supply into western Europe as a result of sanctions on Russia has produced a supply shock that is having, and will continue to have, significant consequences.

Russia, Belarus, and Ukraine produced 15% of the global trade in wood pellet fuel in 2021.

A majority of those exports went into western Europe's heating markets.

Millions of tonnes per year are no longer available!
