

Southeastern Regional Biomass Energy Program

The 1994 Directory of Biomass Sites in Louisiana

*Administered For
The United States
Department of Energy*

Tennessee Valley Authority
Environmental Research Center
Biotechnology and Remediation
Muscle Shoals, Alabama 35660

The 1994 Directory of Biomass Sites in Louisiana

Prepared by

**Louisiana Forest Products Laboratory
School of Forestry, Wildlife & Fisheries
Louisiana Agricultural Experiment Station
Louisiana State University Agricultural Center
Baton Rouge, Louisiana 70803-6202**

and

**Louisiana Department of Agriculture and Forestry
Baton Rouge, Louisiana**

for

**Southeastern Regional Biomass Energy Program
Biotechnical Research Department
Tennessee Valley Authority
Muscle Shoals, Alabama 35660**

**in partial fulfillment of
Grant No. TV92263V**

August 1994

Forward

Agriculture and forestry are the second largest employers in the state of Louisiana. Natural by-products of these industries are biomass waste in the form of bark, wood chips, sawdust, cotton gin trash, rice hulls and sugar bagasse. Disposing of these wastes poses problems for the air, water and landfill space. One popular waste management solution is to use them for fuel. To measure the potential for using biomass waste for fuel and other uses, a study was conducted of sugar cane processors, cotton ginners, rice processors and the primary and secondary wood processors in Louisiana. One result of the study is a directory of these ginners and processors in Louisiana. All cotton ginners, rice processors and sugar processors are included in the directory. However, for primary and secondary wood processors the directory only contains the names of survey respondents.

Acknowledgements

The authors of this directory would like to thank Mr. Michael Bucharth of the Louisiana Department of Agriculture and Forestry for coordination of the project, Mr. Dave Stephenson and Mr. Phil Badger of the Southeastern Regional Biomass Energy Program, Tennessee Valley Authority, Dr. Hong-Lie Qiu of the LSU Remote Sensing Lab; Mr. Chenyun Gao and Ms. Melissa Gobert of the School of Forestry, Wildlife & Fisheries; and Mr. Michael Heurtin of the LSU Forest Products Lab for their substantial contributions to this project.

Survey Notes & Codes

1. This directory is divided into four sections: 1) Primary Forest Products, 2) Rice, 3) Sugar and 4) Cotton.
2. The TVA facility number is the site's telephone number except for sugar, where telephone numbers are not available.
3. The data for the sugar and rice industries were extracted from reports already produced by the Agricultural Cooperative Extension Service. The data is from 1989, compared to the wood processor data which is from 1993.
4. For the sugar bagasse data, the figures represent the amount of bagasse that was used for energy only. The figures do not represent the total amount of bagasse generated. The surplus of the bagasse generated which was not used for energy was composted.
5. The reports for rice and sugar contain neither energy production and usage data, nor fossil fuel consumption data as this data was not contained in the original reports.
6. The cotton gin trash data is available by parish totals only and is represented by the map located in the Cotton Gin Trash section.
7. Under the Biomass Feedstock Consumption and Fossil Fuel Consumption sections the two letter codes used have the following explanations:

Biomass Feedstock Types:

FR	- Forest roundwood/chips
SR	- Short rotation Woody chips
LM	- Lumber Mill Residue
WW	- Other manufacturing wood waste
UW	- Urban wood waste
PP	- Pulp & Paper Wood Residue
AW	- Agricultural/Food waste
AM	- Animal Manure
SS	- Sewage Sludge
MW	- Municipal solid waste
RD	- Refuse Derived Fuel
BL	- Black Liquor
BA	- Bark
OT	- Other

Fossil Fuel Types:

CO	- Coal
#2	- #2 oil
#6	- #6 oil
NG	- Natural Gas
PR	- Propane

GIS

The database from which this report is compiled is in the format of a Geographic Information Sytem (GIS) located on the Louisiana State University Agricultural Center campus. This means that the data found herein is associated with map location data in a computerized format so that customized inquiries can be made. U.S. Forest Service inventory and other biomass data for the state are also included. This is an enormous tool for site location and other queries. For example, if you want to know the biomass producers and users within a certain radius of a point in Louisiana, the computer can quickly give that information. Interested persons are encouraged to contact the Louisiana Forest Products Lab at (504)388-4255.
