Information Exchange for the development of Sustainable Wood Process Industry

Information Sharing or exchange between Governor and researcher; government between industry; resource supplier, producer and consumer have influenced the development of sustainable wood process industry substantially.
Characteristics of low efficiency information sharing

- Information sharing between Policy maker and related researcher is in low efficiency
- Information exchange between Policy maker and industry is insufficiency
- Information between Process industry and resource supplier is isolated
Information Exchange for the Development of Sustainable Wood Process Industry

- Enhance communication between the policy maker and institute researcher, improve the capacity of researcher
- Under the support of government, with the help of institute, improve the association’s function creator, make information exchange high efficiency extensively
  - Assisting the policy implementation in the industry
  - Educating Chinese firms to practice sustainable management in foreign countries
  - Promoting the producer be aware of the requirement of the supplier especially in the sustainable forestry management area
  - Helping communication between consumer and producer area
  - Feedback the industry’s implement of the policy
  - Seeking the help for what the industry needs and make the institute meet the need especially in the technical innovate.
China’s Role in Sustainable Trade—What is being done

- Provided technical and financial assistance to Myanmar and Laos to Plant Trees in Place of Drug Plantation
  - From 1990’s until 2005, 500 million RMB pour in it
  - Over 41000 ha are alternatively-planted
  - Over 36000 ha are in Myanmar
  - Over 7600 ha are rubber plant
China’s Role in Sustainable Trade-What is being done

- Provided Forest Sustainable Management training courses for the developing countries
  - From 2005, this training course have trained forestry official coming from Myanmar, Papua New Guinea, Congo, Equatorial Guinea, Liberia
  - This year’s will soon begin in Beijing in middle May
China’s Role in Sustainable Trade—What is being done

- Provided Tropical Forest Sustainable Management training course for the tropical countries
  - From 2003 until last year, already 4 training courses have successfully held
  - Participants coming from Asia, Africa around 20 countries
China’s Role in Sustainable Trade—What is being done

- National leader commitment to international cooperation, participation in FLEG process.
- Bilateral communications (Russia, Indonesia, Myanmar, etc.) on collaboration;
- Chinese delegation to Indonesia to further investigate forest use and trade process;
- Government initiated forest policy dialogue to discuss international and domestic strategy against illegal logging;
- Forestry sustainable management training will be involved in the structure of China and Africa Frum, under the agriculture training program.
Projects I am undertaking

1. Survey of the processing industry and research so as to built the data base
2. Chinese timber produce and demand survey and research
What I learn from the survey in the wood based processing base in South China:

- It’s the selection of globalization that make China the manufacture for the world. Not any country’s decision.
- This selection give the chance for every countries——supplier, producer and consumer to benefit from it.
What I learn form the survey in the wood based processing base in South China

- this selection improve the welfare of the people in the developed consumer countries for the high quality wood products with relatively low price.

- this selection provide working opportunity for Chinese rural labours, improve their income, and the industry’ technique upgrade.

- this selection provide resource supplying countries the chance to sustainable management their forest.
Being the manufacture of the world, The smart and hard working labours in China contribute a lot to the global ‘s sustainable forest resource industry indirectly.

- They use wood in the way as if it was gold, try to utilize it in a high rate.
- The existing of typical Chinese wood Industry group, help the utilization rate of wood goes to the top level that none other countries can ever catch up with.
- Large amount of small size firms around the big ones use the abandoned wood as their material to produce packing box, furniture fittings, in our word——make the waste into treasure!
thank you, I hope this has been of interest
